

## Welcome to Wulf Johanssen!

As an independent service provider, Wulf Johanssen offers a comprehensive range of services for the repair and overhaul of diesel engines from various manufacturers used in locomotives and rail vehicles.

### Our Range of Services for Engines

- Complete overhauls and reconditioning of diesel engines
- Mobile service – our technicians come directly to your locomotive
- Repair or replacement of turbochargers
- Cylinder head reconditioning, or supply and installation of replacement and new cylinder heads
- Injector testing and fuel injection pump servicing
- Global spare parts service
- Machining and reconditioning of individual components (e.g. engine blocks, crankshafts, etc.)

### Our On-Site Rail Services

Our service technicians are ready to support you at any time. We come directly to your locomotive. Minor repairs, component replacements, and partial engine overhauls can be carried out on-site, depending on local conditions – all without the need for a longterm maintenance contract. Major overhauls or the reconditioning of engines and components are performed at our facility in Kiel.

### Auxiliary Engines & Small Diesel Units

For smaller engines – such as auxiliary diesel units or generators up to 200 kW – we also offer a full range of services. For more information, feel free to click [here](#) to visit our website.

### ECM Certification

In accordance with the ECM certification guidelines, Wulf Johanssen is certified as an Entity in Charge of Maintenance (ECM4) for engines and drive system components in accordance with EN 15380-2.
